

1. Product flow (what the UI must support)

Mentee completes task / answers MCQ correctly

Status = "Under review" (submission_status: submitted)
Progress % does NOT increase yet

Mentor sees item in Reviews + Progress Tracker

☐	Approve	→	status: approved, is_completed: true
☐	Reject	→	status: rejected, is_completed: false

Item type	When it enters review	What mentor sees
Task with submission_type ≠ none	After mentee submits text / link / file	Submission content + Approve / Reject
Task with submission_type = none	Auto-completes (no review queue)	Shown as completed in week list
MCQ	After mentee answers correctly	Question, options, mentee answer highlighted, correct option marked

Wrong MCQ answers do **not** enter the review queue. Mentee can retry until correct.

2. Status vocabulary (use consistently in UI)

<code>submission_status</code>	<code>is_completed</code>	Badge / copy
<code>none / null</code>	<code>false</code>	Pending
<code>submitted</code>	<code>false</code>	Under review
<code>approved</code>	<code>true</code>	Approved
<code>rejected</code>	<code>false</code>	Needs revision

Derived helper for list UIs:

Derived status	Meaning
<code>pending</code>	Not started
<code>in_progress</code>	Submitted / rejected / attempted
<code>completed</code>	Approved / completed

4. Mobile / app API (same feature)

Base URL: `{{baseUrl}}/api/v1`

Auth: `Authorization: Bearer {token}`

Headers: `Accept: application/json`

4.1 Mentee — submit task

```
POST /mentee/curriculum/tasks/{taskId}/complete
```

Field	When
<code>(none)</code>	<code>submission_type</code> is <code>none</code> → completes immediately

```
submission_text /
submission_url /
submission_file
```

Required submission types →
enters review

Success (awaiting review)

```
{
  "status": true,
  "statuscode": 200,
  "message": "Submission received. Awaiting mentor review",
  "completed": false,
  "progress": { "...": "..." },
  "summary": { "...": "..." }
}
```

UI: show **Under review**, do not mark the task as done in progress %.

4.2 Mentee — answer MCQ

POST /mentee/curriculum/mcqs/answer

```
{
  "answers": [
    { "mcq_id": 12, "selected_option": 1 }
  ]
}
```

selected_option is **1-based**. (selected_index 0-based also accepted.)

Correct → under review

```
{
  "results": [
    {
```

```
    "mcq_id": 12,  
    "correct": true,  
    "awaiting_review": true,  
    "submission_status": "submitted",  
    "message": "Correct! Awaiting mentor approval."  
  }  
]  
}
```

Already submitted

```
{ "status": false, "message": "Already submitted. Waiting
```

UI: lock options; show under-review state until mentor acts.

4.3 Mentor — list pending submissions

Also filter by `user_id` when `mentee_id` is set so count and list stay aligned.

```
GET /mentor/submissions?mentee_id=2&per_page=20
```

```
{  
  "status": true,  
  "mentee_id": 2,  
  "pending": 1,  
  "pending_total": 2,  
  "submissions": [  
    {  
      "id": 41,  
      "item_type": "mcq",  
      "item_id": 12,  
      "mentee_id": 2,  
      "mentee": { "id": 2, "name": "Vijay Kumar", "avatar"  
      "title": "Who was the founder of the Mughal Empire"  
      "track_name": "Job Opportunities",
```

```

    "month_number": 1,
    "week_number": 1,
    "submission_status": "submitted",
    "submission_text": null,
    "submission_url": null,
    "mcq": {
      "options": ["Babur", "Humayun", "Akbar", "Shah Ja
      "selected_index": 0,
      "selected_option": "Babur",
      "correct_index": 0,
      "correct_option": "Babur",
      "is_correct": true,
      "points_earned": 1,
      "explanation": null
    }
  }
],
"meta": {
  "current_page": 1,
  "last_page": 1,
  "per_page": 20,
  "total": 1
}
}

```

- `pending` — count for the current filter (`mentee_id` if passed, else all)
- `pending_total` — mentor's total pending across all mentees (sidebar badge)
- `meta.total` — same filtered total as `pending` (paginated list)

App screen: Reviews inbox — card per submission; for `item_type=mcq` render options with selected + correct styling.

4.4 Mentor — approve / reject

```
PATCH /mentor/submissions/{progressId}/review
```

POST /mentor/submissions/{progressId}/review

```
{
  "submission_status": "approved",
  "mentor_feedback": "Great work – move to week 2."
}
```

submission_status	Effect
approved	Counts toward journey progress
rejected	Mentee can resubmit / retry

```
{
  "status": true,
  "message": "Submission approved. Progress updated.",
  "submission": { "...updated fields..." }
}
```

4.5 Mentor — full mentee curriculum + statuses

GET /mentor/mentees/{menteeId}/curriculum

Use for Progress Tracker detail (tracks → months → weeks → tasks / mcq_topics).

Task objects include:

- status, submission_status, submission_text, submission_url
- progress_id, mentor_feedback, reviewed_at

MCQ objects include:

- status, submission_status, progress_id, mentor_feedback

- `last_attempt` (`is_correct`, `selected_index`, `points_earned`, `attempted_at`)

Summary includes `pending_submissions`.

4.6 Mentee — curriculum / progress read

```
GET /mentee/curriculum
GET /mentee/progress
```

Reflect the same status fields so mentee home/week UIs stay in sync with mentor reviews.
